INFO [alembic.runtime.migration] Context impl SQLiteImpl.

INFO [alembic.runtime.migration] Will assume non-transactional DDL.

2026/09/28 07:49:01 WARNING mlflow.tracking.context.registry: Encountered unexpected error during resolving tags: 'getpwuid(): uid not found: 50000'

2026/09/28 07:49:02 WARNING mlflow.utils.git_utils: Failed to import Git (the Git executable is probably not on your PATH), so Git SHA is not available. Error: Failed to initialize: Bad git executable.

The git executable must be specified in one of the following ways:

- be included in your \$PATH
- be set via \$GIT_PYTHON_GIT_EXECUTABLE
- explicitly set via git.refresh(<full-path-to-git-executable>)

All git commands will error until this is rectified.

This initial message can be silenced or aggravated in the future by setting the

\$GIT_PYTHON_REFRESH environment variable. Use one of the following values:

- quiet|q|silence|s|silent|none|n|0: for no message or exception
- warn|w|warning|log|l|1: for a warning message (logging level CRITICAL, displayed by default)
- error|e|exception|raise|r|2: for a raised exception

Example:

```
export GIT_PYTHON_REFRESH=quiet
```

/usr/local/lib/python3.11/site-packages/mlflow/types/utils.py:406: UserWarning: Hint: Inferred schema contains integer column(s). Integer columns in Python cannot represent missing values. If your input data contains missing values at inference time, it will be encoded as floats and will cause a schema enforcement error. The best way to avoid this problem is to infer the model schema based on a realistic data sample (training dataset) that includes missing values. Alternatively, you can declare integer columns as doubles (float64) whenever these columns may have missing values. See ``Handling Integers With Missing Values`` <https://www.mlflow.org/docs/latest/models.html#handling-integers-with-missing-values> for more details.

2026/09/28 07:49:12 WARNING mlflow.tracking.context.registry: Encountered unexpected error during resolving tags: 'getpwuid(): uid not found: 50000'

2026/09/28 07:49:12 WARNING mlflow.utils.git_utils: Failed to import Git (the Git executable is probably not on your PATH), so Git SHA is not available. Error: Failed to initialize: Bad git executable.

The git executable must be specified in one of the following ways:

- be included in your \$PATH
- be set via \$GIT_PYTHON_GIT_EXECUTABLE
- explicitly set via git.refresh(<full-path-to-git-executable>)

All git commands will error until this is rectified.

This initial message can be silenced or aggravated in the future by setting the

\$GIT_PYTHON_REFRESH environment variable. Use one of the following values:

- quiet|q|silence|s|silent|none|n|0: for no message or exception
- warn|w|warning|log|l|1: for a warning message (logging level CRITICAL, displayed by default)
- error|e|exception|raise|r|2: for a raised exception

Example:

```
export GIT_PYTHON_REFRESH=quiet
```

/usr/local/lib/python3.11/site-packages/mlflow/types/utils.py:406: UserWarning: Hint: Inferred schema contains integer column(s). Integer columns in Python cannot represent missing values. If your input data contains missing values at inference time, it will be encoded as floats and will cause a schema enforcement error. The best way to avoid this problem is to infer the model schema based on a realistic data sample (training dataset) that includes missing values. Alternatively, you can declare integer columns as doubles (float64) whenever these columns may have missing values. See [`Handling Integers With Missing Values <https://www.mlflow.org/docs/latest/models.html#handling-integers-with-missing-values>`](https://www.mlflow.org/docs/latest/models.html#handling-integers-with-missing-values) for more details.

mkdir -p failed for path /.config/matplotlib: [Errno 13] Permission denied: '/.config'

Matplotlib created a temporary cache directory at /tmp/matplotlib-l18oy03f because there was an issue with the default path (/.config/matplotlib); it is highly recommended to set the MPLCONFIGDIR environment variable to a writable directory, in particular to speed up the import of Matplotlib and to better support multiprocessing.
